

BC PERINATAL HEALTH PROGRAM – PERINATAL DATABASE REGISTRY

ALPHABETICAL LIST OF FIELDS

One of the mandates of the BCPHP is “the collection and analysis of data to evaluate perinatal outcomes, care processes and resources via a province-wide computerized database”. This mandate led to the development of the British Columbia Perinatal Database Registry (BCPDR), with its stated mission to collect, maintain, analyze and disseminate comprehensive, province-wide perinatal data for the purposes of monitoring and improving perinatal care. Rollout of the Registry began in 1994, with collection of data from a small number of hospital sites. Participation increased every year, resulting in full provincial data collection commencing April 1, 2000. The BCPDR is a relational database containing over 300 fields, and now with complete provincial data, is a valuable source of perinatal information.

On April 1, 2001 British Columbia implemented ICD-10 & CCI coding. From April 1, 2001 to March 31, 2004 the ICD-10 & CCI codes were converted to ICD-9 codes in the Perinatal Database Registry. From April 1, 2004, the ICD-10 and CCI codes have been used
